

## Enterprise Storage for Animation Studio's Everyday Productivity with Data Protection and Versioning

As computer graphics, animation and artistry evolves and grows, project file sharing and collaboration become a critical factor to improve productivity, reduce costs and time and enhance project completion. In every aspect of the production pipeline, file storage and management together with performance and snapshot protection help deliver projects with quality and precision.

Typical NAS systems cannot address demanding requirements because they are built with consumer-grade components. They are unable to scale and perform well and they lack the enterprise reliability and resiliency to build project confidence.

Intel E5 Processor(s)	8-28x Cores	2.1-3.5 GHz
64-192GB ECC RDIMM	2-4X 10GbE	500TB Capacity
600MB/s+ Throughput	SSD OS Drive	8TB Per Disk

Introducing Robust ZFS Storage Solution, an Enterprise Grade File Storage NAS system for SMB level CG Animation and Development ecosystem.

This high performance NAS comes with a combination of high memory specifications starts with 64GB ECC RDIMMs, Intel Xeon E5, Enterprise Grade SSDs, 2-4x 10 Gigabit network aggregation of high throughput (> 600MB/s) and high capacity SATA hard disk drives which can scale to half a Petabyte.

It has a built-in snapshot file protection technology which can revert to previous file and folder versions, and help to resolve accidental file deletion or corruption, ransomware and used as a primary backup to projects.

1. Actual product appearance might be varied.
2. Rack layout might be varied subject to planning and design.
3. Not all features are available under different operating systems.
4. Actual throughput is subject to networking setup and user's workstation configuration.
